

Bring your
intralogistics
ambitions
to life.

IOOTHER
improving intralogistics

Thinking hybrid

By always making a thorough and detailed pre-analysis of your intralogistics needs, we take your ambitions as the starting point for process optimization. Not an existing pallet of system elements already available on stock. We then combine this into a clever hybrid system solution to truly optimize your return, both in terms of effectiveness and efficiency, and to lower your total investments. We always do this in a friendly, considerate, and fruitful collaboration, where you will highly appreciate our distinctively personal approach and accessibility.

Our soul uniqueness

The soul of every integrated intralogistics system is our Inther LC Software. It connects everything to a smooth and efficiently running system and is highly adaptive to every hardware component, whether it's an Inther brand or not. Inther Group's history is deeply founded in software solutions and efficiency, which makes us leading edge in the field of intralogistics software. Our unique way of approaching intralogistics software guarantees optimized software solutions that save you lots of costs to increase your ROI tremendously.

SOFTWARE

Free body, free spirit

Inther Group is not only a true system integrator, we are also completely hardware independent. This ensures you that all hardware options available in the market are considered and where necessary combined/connected (shuttle system, miniload, robot piece picking, Goods to Person, etc.) to best fit your intralogistics demands. This enables us as well to select the most innovative hardware components for a modular logistics hardware framework that forms the robust and solid body to bring your intralogistics ambitions to life.

Healthy heartbeat for life

After your intralogistics ambitions have come to life, we make sure the heart of your business stays healthy throughout its entire lifespan. Continuity is supported through our optimized maintenance care and by our experienced engineering staff at the 24/7 service desk. By cooperating closely together and continuously analyzing the output data of your real-life processes in detail, we pro-actively keep on improving your intralogistics system to maintain an optimal return and the best fitting solution for your changing intralogistics needs.

SERVICE

Your advantages

- › We unburden you by optimizing your entire intralogistics process from start to finish.
- › Our distinctive personal approach and accessibility create a mutually pleasant, respectful, and successful collaboration.
- › Detailed pre-analysis ensures that we thoroughly understand your core challenges and address them with optimal solutions.
- › As a fully independent integrator, we always provide you with the most suitable, effective, and efficient hybrid intralogistics solution for your needs.
- › Our root focus on software optimization lowers your total costs and increases your ROI.
- › With our professional and proactive after-sales support, you are assured of a lifelong optimized system that meets your (changing) needs in the future.
